

Food Systems Modeling Learning Community

EFSNE Conference

Greenbelt, MD

December 11, 2015

Learning Community Formation

1. Formation of learning communities explicit in grant proposal
2. Kate Clancy and Kathy Ruhf identify regional and local modeling as ideal topic due to work Chris Peters was undertaking on food prints and the startup of the Scenario and Models team
3. In late 2013, Jeff O'Hara and Rich Pirog invited to form planning committee with Kate, Kathy, and Chris
4. Planning committee first met on January 3, 2014

Learning Community Formation

4. Early 2014: Identify purpose of LC, activities of LC, and participating modelers
 - LC institutionalized at PSU
 - Stage 1: Interdisciplinary presentations among modelers
 - Stage 2: Invite practitioners
5. March 31, 2014: planning committee sent invitations to modelers to participate in learning community
6. First teleconference of learning community was May 2014
7. First presentation by Chris Peters on July 9, 2014

MSU-UCS Meeting Description

- Meeting co-hosted by Michigan State University Center for Regional Food Systems and Union of Concerned Scientists on Jan. 31 and Feb. 1, 2013
- 12 economists/local food researchers attended workshop
- Follow-up webinar on May 20, 2013 with over 250 attendees to discuss meeting findings and outcomes

MSU-UCS Meeting Objectives

- Synthesize and translate findings of local food economic impact studies
- Identify “best practice” standards associating with undertaking studies
- Identify critical due diligence questions that commissioners of economic impact studies should ask
- Identify future research priorities

MSU-UCS Meeting Conclusions

- Improved data collection
- Studies on larger geographic scales than currently being conducted
- Identify other economic contribution of local foods besides counting jobs
- **Formation of a learning community of economists and local food researchers to review and critique the design, methods, and conclusions of studies**

Members of the Food System Modeling Learning Community

- Florence Becot University of Vermont
- Kate Clancy EFSNE
- David Conner University of Vermont
- Gail Feenstra UC Davis
- Miguel Gomez Cornell University
- Michael Hamm Michigan State University
- Shermain Hardesty UC Davis
- Casey Hoy Ohio State University
- David Hughes Clemson University
- Becca Jablonski Colorado State University
- Sophia Kotsiri Purdue University
- Steve Miller Michigan State University
- Jeff O'Hara AMS/USDA
- Chris Peters Tufts University
- Rich Pirog Michigan State University
- Kathy Ruhf NESAWG
- Dawn Thilmany Colorado State University

Learning Community Presentations

1. Chris Peters – July 9, 2014
2. Becca Jablonski – September 17, 2014 – Evaluating the Economic Impacts of Policies Supporting Alternative Food Systems
3. Steven R. Miller – December 3, 2014 – Valuing Michigan's Local Food System: A Replicable Model for Valuing Local Food

Learning Community Presentations

4. David Conner, David Hughes, Becca Jablonski, Dawn Thilmany – January 21, 2015 – Framing Different Phases of Assessing Economic Implications of Local and Regional Food Systems
5. Miguel Gomez– March 25, 2015 – Food Systems Modeling and New Ways to Think about Local: The Eastern Broccoli Project
6. Kate Clancy– June 10, 2015 – A Framework for Assessing Effects of the Food System
7. Casey Hoy – July 15, 2015 – Food Systems Modeling: An Approach with Ecological Roots

Food Systems Modeling and New Ways To Think About Local: The Eastern Broccoli Project*

- Miguel I. Gómez (Cornell University)
- Shadi Atallah (Purdue University)

- *FOOD SYSTEMS LEARNING*
- *COMMUNITY WEBINAR March 25, 2015*

• **Based on* Atallah, S.S., M.I. Gómez, T. Björkman. 2014. "Localization effects for a fresh vegetable product supply chain: Broccoli in the eastern United States." *Food Policy*, 49: 151–159.

Realizing opportunity

Attention in NYC

Attention in NYC

Att

Brocclyn

Economic Component

Goals –

- Would an Eastern broccoli be competitive?
- Would retailers/consumers accept Eastern broccoli?

Five Phases

- Assess cost-efficiency (harvest, pre- and post-harvest)
- Assess consumer willingness to buy and pay for new Eastern broccoli varieties
- Identify cost-minimizing supply chain structures

Three Scenarios of Acreage Increase in the East Coast

- Conservative: 15% increase
- Most likely: 30% increase
- High: 100% increase
- We employ the shadow prices on land to allocate increases in each supply location-season combination – the method is recursive

Optimal Broccoli Acreage Increase in Production Locations, by season

	Optimal Broccoli Acreage Increase (acres)			Fraction of total vegetable acreage (%) ^a
	Spring	Summer	Fall ^b	
<u>15% acreage increase scenario</u>				
Florida ^b	0	0	0	0
New Jersey	0	48	0	0
Pennsylvania	0	1,684	0	3
Virginia	0	0	0	0
Total	0	1,733	0	2
<u>30% acreage increase scenario</u>				
Florida	0	0	1,012	0
New Jersey	0	48	0	0
Pennsylvania	0	2,462	0	4
Virginia	0	0	0	0
Total	0	2,511	1,012	1
<u>100% acreage increase scenario</u>				
Florida	2,810	0	2,857	2
New Jersey	0	397	0	1
Pennsylvania	0	3,501	0	6
Virginia	307	0	1,880	8
Total	3,117	3,899	4,736	3

Open Discussion

- How to share models with non-academics?
- How to bring practitioners into the learning community?
