

## Lime and Magnesium Recommendation:

pH Goal: 6.5 See Table 1 for lime recommendations based on target pH

### Message when lime recommendation is greater than 4000 lb/A:

Apply lime in increments of 2000-3000 lbs/A over several years. For example, if total lime recommended is 4000 lbs/A, apply in 2 applications of 2000 lbs/A over two growing seasons. Do not apply more than 3000 lbs/A in any one given application.

### Message when soil pH is greater than 6.0 and less than 6.5:

Optimum pH for tree fruits is 6.0-6.5. Although the sample pH is equal to or above the minimum value of 6.0, lime is recommended to maintain soil above the minimum pH over the next 3 years.

Opt soil test Mg (ppm): 50 See Table 2 for Mg recommendations based on optimum soil test Mg

## Nitrogen Recommendation:

Nitrogen should be applied based on leaf analysis and shoot growth. In absence of a current season's leaf analysis, shoot growth on bearing trees should be 18 to 24 inches. Another general guideline is to apply 0.03 lb of actual N per tree per year of tree age. If following this guideline, do not exceed 0.30 lb of actual N per tree per year.

If terminal growth was excessive, fruit color was inadequate or major renovative pruning was performed, a reduction in the rate of N application is in order.

## Phosphorus Recommendation (lb P2O5/A):

(Optimum soil test P: 50 - 100 ppm)

Soil test P (ppm)	P2O5 lb/A
0	175
5	175
10	175
15	150
20	150
25	150
30	150
35	100
40	100
45	100
50	100
55	

## Potassium Recommendation (lb K2O/A):

(Optimum soil test K: 150 - 300 ppm)

Soil test K (ppm)	K2O lb/A
0	80
10	80
20	80
30	80
40	60
50	60
60	60
70	40
80	40
90	40
100	40
110	30
120	30
130	30
