

Lime and Magnesium Recommendation:

pH Goal: 6.5 See Table 1 for lime recommendations based on target pH

Message when soil pH is greater than 6.0 and less than 6.5:

Optimum pH for tree fruits is 6.0 - 6.5. Although the sample pH is equal to or above the minimum value of 6.0, lime is recommended to maintain soil above the minimum pH over the next 3 years.

Opt soil test Mg (ppm): 50 See Table 2 for Mg recommendations based on optimum soil test Mg

Nitrogen Recommendation:

Nitrogen should be applied based on leaf analysis and shoot growth. In absence of a current season's leaf analysis, shoot growth on bearing trees should be 18 to 24 inches. Another general guideline is to apply 0.03 lb of actual N per tree per year of tree age. If following this guideline, do not exceed 0.30 lb of actual N per tree per year.

If terminal growth was excessive, fruit color was inadequate or major renovative pruning was performed, a reduction in the rate of N application is in order.

Phosphorus Recommendation (lb P₂O₅/A):

(Optimum soil test P: 50 - 100 ppm)

Soil test P (ppm)	P ₂ O ₅ lb/A
0	200
5	200
10	200
15	175
20	175
25	175
30	175
35	150
40	150
