

PSU Spray Record-
Keeping Spreadsheet

PSU Spreadsheet

Designed to make your application reporting simpler and easier

Contains 500+ orchard application products

- You enter the product name and application information
- Spreadsheet completes
 - Registration number
 - REI information
 - PHI information
 - Report format
 - Other information

Gives you

- final report form for submission
- Report for managing your REIs
- Central document for recording and organizing all your orchard applications

+ SAVE FOR LATER

- List of 500+ orchard application products prepared in the spreadsheet
 - REIs, PHIs, and other relevant information available in one convenient format
 - EPA registration numbers, active ingredient, formulations auto-populate once you select the commercial product name applied
- Drop-down menus for record-keeping of product applications
- Automatic calculation of REIs
- One convenient spreadsheet for housing all of your spray information
- Accepted by Rice Fruit Company and Knouse Foods as documentation of orchard application record
- How many of you are using it?

Our team was given the task of updating the spreadsheet for 2019.

- We updated registration numbers, REIs, PHIs, products that have been added or dropped out of use by the industry for ~600 products
 - For apple and for peach only
- Updated the reporting tools for printing out reports
- Created a reporting form to simplify and streamline the process for entering orchard application information.

Enter the information
one time. It goes
three different places.

Apple Report

Application record for orchard maintenance products, to be used for recordkeeping of product applications to apple orchards

Spreadsheet format initialized by		Disclaimer: Time and effort were spent to enter registration numbers, REI's, and PHI's from product labels. However, the only way to ensure the accuracy of your records is to verify that the EPA number in this program correlates to the product being used and read the label yourself. This spreadsheet was developed for recordkeeping purposes only, for further IPM recommendations see the Penn State Tree Fruit Production Guide.
